| Objectives of the Course: | This course aims to introduce students to the principles and techniques of Vedic Mathematics, providing them with tools to perform high-speed arithmetic, including addition, subtraction, multiplication, and division using ancient Sutras and Up-Sutras. Students will explore efficient methods for calculating squares, cubes, and their roots, enhancing their mental math skills. Additionally, the course covers Vedic approaches to solving algebraic equations, enabling students to tackle simple, simultaneous, and quadratic equations with ease and precision. Through these techniques, students will gain a deeper appreciation for the power and simplicity of Vedic Mathematics. |                           |           |                       |                             |

(4 Lectures)

### Unit -II

#### REARING OF BEES

Artificial bee rearing (Apiary), beehive- Newton and Langstronh; bee pasturage; selection of bee species for apiculture (*Apis cerana indica* and *A. mellifera*), methods and equipment (indigenous and modern) for beekeeping and extraction of honey bee products and their processing; apiary management- honey flow and lean period.

(5 Lectures)

### Unit -III

#### PROBLEMS RELATED APICULTURE AND THEIR MANAGEMENT

Bee diseases, control and preventive measures; enemies of bees and their management; effects of pollutions on honeybees.

(3 Lectures)

### Unit-IV

#### ECONOMY OF BEEKEEPING

Pollination: significance of beekeeping in horticultural gardens and agricultural fields; employment opportunities, economics, scope of women empowerment in apiculture industry; role of small- and large-scale beekeeping in growth of Indian economy (honey production in India); honey mission and sweet kranti; organisations and training institutes involved in beekeeping in India.

(3 Lectures)

#### Practical:

1. Study of specimens and permanent slides: *Apis cerana indica*, *A. mellifera*, *A. dorsata*, *A. florea*, *Meliponasp.*, honeybee enemies, life history and social castes of honey bees: egg, larva, pupa, adult (queen, drone and worker), mouthparts, antenna, wings, sting apparatus and temporary mounts of legs (antenna cleaner, mid leg and pollen basket), honey bee diseases.
2. Study of structure of natural bee hives (different types of cells in honeybee comb) and artificial hive (Longstroth/Newton).
